EXPERIENCE

Designer Intern - Bob AI Team May 2026 - August 2026

IBM

- Collaborated with PMs, developers, and 5 fellow design interns to redesign IBM Bob's AI evaluation dashboard by conducting 10+ user interviews and synthesizing 30+ findings to define two core workflows: benchmark analysis and job-run analysis.
- Engineered 2 core AI evaluation workflows in React and CSS, leveraging IBM Bob for AI-assisted development and Git/GitHub for collaboration while contributing 5+ reusable components to the Bob IDE design system
- Validated and shipped the experience through usability testing with 5+ users, reaching 100+ internal users and 500+ runs shortly after launch and presenting the final product to IBM executives.

Product Designer & Front-End Developer Jan 2026 - June 2026

UCI × Leidos Capstone

- Led UI/UX and front-end development across a 5+ member team, owning 3 of 5 core workflows and implementing approximately 70% of the React interface while leading the migration from Streamlit to React.
- Designed and developed an AI persona platform supporting 4 distinct personas, integrating the front end with a Qwen3-1.7B language model fine-tuned with LoRA on 6,200 autobiographical memories and agentic capabilities through MCP.
- Delivered and presented the research platform to 10+ Leidos stakeholders, demonstrating an end-to-end system for more emotionally intelligent human-AI interaction and gathering feedback to inform continued research.

UI/UX Design - Engineering Intern June 2025 - August 2025

Masimo

- Designed and shipped 3 major device iterations with 50+ screens each for pulse oximetry products, translating clinical workflows and product requirements into production-ready interfaces.
- Improved communication between design and engineering teams by introducing detailed UI flow maps to clarify product logic, interaction states, and implementation requirements across 2+ engineering teams.

UI/UX Design Intern March 2025 - August 2025

Endgame.AI (Startup)

- Joined as a founding design team member, establishing the product's visual direction and creating 2+ scalable brand and UI libraries to support consistent design across the platform.
- Collaborated directly with the CEO and 15+ engineers, introducing weekly cross-functional design syncs and creating 3+ UI flow maps to improve product alignment, handoff, and implementation.

PROJECTS

YUCare

- Surveyed 50+ patients and healthcare staff to identify pain points across the urgent-care experience, translating findings into features focused on patient-provider communication and transparency.
- Designed 20+ wireframes and 5 interactive prototypes in Figma, iterating through usability feedback and developing a WCAG-aligned design system for an accessible healthcare experience.

ZotConnect

- Won Best Overall Hack against 100+ teams for developing a research-opportunity platform featuring a generative AI resume critique tool powered by Google Cloud APIs.

EDUCATION

University of California, Irvine September 2023 - June 2027

- Bachelor of Science in Informatics; Specialization in Human-Computer Interaction
- GPA: 3.82
- Relevant Coursework: Human-Computer Interaction, Health Informatics, Programming with Software Libraries in Python & Java

SKILLS

- **Design:** Figma, Adobe Creative Suite, Sketch, Prototyping, Design Systems, Interaction Design, User Research, Usability Testing
- **Front-End:** React, JavaScript, HTML/CSS, Node.js, Git/GitHub
- **AI/ML:** Qwen, Ollama, LLM Fine-Tuning, DAPT, Model Context Protocol (MCP), Python, Pandas
- **Hobbies**: Content Creation, Tennis, Pickleball, Photography, Matcha
